Consult vs. Referral: Understanding the Difference

Residents Practice Establishment Assistance Programs (REAP)

This is the two-day abbreviated version of the full residency training program that is offered through non-teaching hospitals for residents in the community.

PMI also presents programs for medical residents on practice establishment, as well as classes tailored specifically for physicians already in private practice. Detailed in-house sessions, customized by medical specialty, are also available.

All PMI representatives are committed to compliance with current federal regulations and legal requirements. This pledge of excellence is reflected in all our training materials.
